MEDIA CLIPWAY SOFTWARE NOW ALLOWS JOURNALISTS TO SEND HIGH-QUALITY FULL-SCREEN LIVE VIDEO WITH INMARSAT BGAN

LIVE DEMONSTRATION AT NAB 2009

PARIS (April 17, 2009) - SeaMobile Europe, formerly Geolink, is announcing a major product update to its popular Media ClipWay software, which allows field journalists to broadcast live full-screen video from locations throughout the world. Users only need a camera, a computer with [Media ClipWay](#) software, and an [Inmarsat BGAN](#) to uplink broadcast-quality video.

The new Media ClipWay feature strengthens SeaMobile Europe's position as the provider of the best all-in-one professional software for field journalists. Media ClipWay is the world's only end-to-end software solution that allows users to send live videos at 25 or 30 fps, in a 720*480 (NTSC) or 720*576 (PAL) DV native format. With the enhanced function, journalists transmit via the 256k BGAN streaming channel, or better, using the new Inmarsat X-stream BGAN service, which delivers data rates from 384kbps up to 450kbps. There is no longer a need to book the SNG vehicle with this cost-effective, lightweight, flexible solution.

"We're using the 'Media ClipWay + BGAN' solution for all of our international reports with only a journalist and an editor in the field, without needing a technical engineer to assist," said Corentin Rivière, Head of mobile equipments at Canal+. "Thanks to this solution, we're confident our reports will always arrive on time. We're also using the live transmission feature several times a day. Without this solution, we wouldn't have been able to broadcast live from the border of the Gaza strip during the last confrontations."

Media ClipWay provides journalists with an easy-to-use software solution that requires no additional software or technical expertise. Users either live-stream or capture and edit videos, select compression, and choose transmit video to send via their computer. The software supports any communication link, including satellite, ISDN, xDSL, and 3G.

During the [NAB show](#) (Las Vegas, April 20-23), demonstrations of Media ClipWay will be on display at Stratos booth (No.OE411) and Inmarsat booth (No.OE435).

About SeaMobile Europe

For nearly 20 years, SeaMobile Europe has been a pioneer in providing global satellite communication services. As a preferred partner of the world's leading satellite networks, we provide services ranging from simple voice communication to the setup of complete IP networks. With our combined professional applications, your communication methods become optimized, reliable, and cost-effective.

SeaMobile Europe, formerly Geolink, is part of SeaMobile Enterprises Group, based in Seattle and Miami (U.S.).
